

Safety from Construction to Operations

Recently during final installations of equipment for ARP II Construction Subcontract Personnel identified a potential unsafe condition with the directions given by contract documents.

During installation of a new power feed (120 v cord connector) for the waste screen unit lift controls in airlock 3, Wheeler Electric identified that if the cord for the lift was disconnected prior to the cord being de energized an exposed energy source could be present at this cord connector end . Wheeler Electric's employees used their extensive experience and expertise during installation of this new system to identify a possible unsafe condition that could have taken place during operations. Wheeler's attention to detail, commitment to safety and overall teaming philosophy on a daily basis is recognized and greatly appreciated.

Wheeler Electric Journeyman Electrician, Lenny Comstock, receiving a safety award from RWMC Construction Managements Area Superintendent, Will Garvin, in recognition of his commitment to safety and the safety of others.

Wheeler Electric Journeyman Electrician, Cutter Hensley, receiving a safety award from RWMC Construction Managements Area Superintendent, Will Garvin, in recognition of his commitment to safety and the safety of others.
